

Engineered to order. Built to last.

# Voltage Phasing Test Pins

For use with G&W Voltage Sensing Bushings

G&W now offers a simple means of verifying proper cable installation via their new phasing test pins. This feature is available on all G&W underground products (SF6 & Trident) where Voltage Sensing Bushings are available.

## OPERATION

During installation and commissioning of the switch, a multi-meter can be used with the phasing test pins to provide a manual method of determining if the cables connected to the switch are in or out of phase. The phasing pins can be mounted on the switch, in a low voltage compartment, or remotely from the switch.

## SAFETY

Voltage Phasing Test Pins are safe to use with no PPE.

▲ Voltage Phasing Test Pins installed on a padmount enclosure.

▲ Example of phasing confirmation test performed.

▲ Voltage sensing bushings mounted on a G&W SF6 insulated switch.
